Mosquito Repellent Shows A 74% Reduction In Bites, Without Harmful Chemicals

SUMMARY: Healing Touch Ventures, Inc. is a distributor and online retailer (GenuineShooTAG.com) for *shoo!TAG*TM, a product that protects people and animals from insect pest bites – without the harmful chemicals.

Fleas and ticks are dreadful. Not only do they annoy the heck out of people and their pets but they also pose a threat to health. It is no wonder that people get into a frantic search for the right anti-flea potions and mosquito repellents. While there are many products out there, none of them guarantee to be absolutely safe for use and friendly to the environment at the same time.

GenuineShooTAG.com introduces *shoo!TAG*TM, a revolutionary product that helps repel and reduce fleas, flies, ticks and mosquitoes that infest people and animals. A revolutionary "green" solution, *shoo!TAG*TM is a wearable tag that is chemical free, eco-friendly, and allows people, animals and pets to enjoy the outdoors without having to use harmful chemicals for protection from biting insect pests. Instead of using chemical based pest control products, use *shoo!TAG*TM which is made of recycled materials, is odor-free and easy to use. Unlike chemical flea, tick and mosquito repellents, *shoo!TAG*TM products are non-toxic and eco-friendly, allowing people to reduce man's carbon footprint while protecting themselves and their animal friends from biting insects.

The *shoo!TAG*TM uses [electromagnetic frequencies](#) to create a protective barrier from pests. It achieves a full barrier within 24 hours after the tag is attached, and lasts up to 4 months. This tag is waterproof and is safe for humans, animals and the planet.

"I really like your *shoo!TAG*TM and I really believe in them. I've been using them on my dogs for almost a year now. I don't understand how they work, but I know they do! It's a great product; one that I wouldn't mind being affiliated with," Terri Parrow Botsford of Virginia, enthuses.

GenuineShooTAG.com reports that the mosquito repellent test on August 18, 2010 was a success. Dr. Fink of Texas A&M University directed and proctored the field trial which showed a 74% reduction in bites during an extreme test (1,000 mosquitoes in each tent). The success of the [Mosquito Field Trial](#) shows that *shoo!TAG*TM is a valuable alternative to chemical treatments. More extensive scientific studies are planned.

Who says there is no way to win the battle against insect pests without harming nature? Check out <http://www.GenuineShooTAG.com> and discover this revolutionary product.
